

## Petanque Comes to Lake Berryessa

Thanks to Spanish Flat renaissance man, Geoff Lake, many of us are learning to speak "Petanque." Petanque was invented by French Navy seamen, who used small cannon balls, and is played outdoors on any reasonably firm surface: your yard, the park, a field. Find a place that is open and fairly flat. Petanque is much like bocce without the walls.

You can play singles with one player on each side, doubles, or triples. Each team's boules will have groove patterns that distinguish them from the other side's boules.

The team that wins the coin toss chooses the starting location and then selects one of their players to throw out the jack. Once a circle is drawn, the player then stands with both feet inside the circle and throws the jack. The jack can be thrown in any direction.

The player attempts to throw the boule so that it lands as close to the jack as possible - it is okay to hit the jack. A player from the opposing team then steps into the circle and attempts to land his boule closer to the jack even if it means knocking his opponents out of the way. The other team must continue throwing boules until they take the lead or run out of boules.

Once a team has used all its boules, the other side is allowed to throw the rest of its boules. When all boules are thrown, the points are counted. The team that has the boule closest to the jack wins the round. In addition, they also receive a point for each boule that is closer to the jack than their opponents closest boule. The first team to earn a total of agreed upon points wins the game. There is not a required number of rounds that must be played.

Petanque in France, 1970s

## Remember Happy Days, Good Ole Days, Have Some Smiles For The Holidays!

### The Turkey Popped Out of the Oven

The Turkey popped out of the oven  
and rocketed in to the air;

It knocked every plate off the table

and partly demolished a chair.

It ricocheted into a corner  
and burst with a deafening boom,

Then splattered all over the kitchen,  
completely obscuring the room.

It stuck to the walls and the windows,

it totally coated the floor,

There was turkey attached to the ceiling,

where there had never been turkey before.

It blanketed every appliance,  
it smeared every saucer and bowl;

There wasn't a way I could stop it;

that turkey was out of control.

I scraped and I scraped with displeasure

and thought with chagrin as I mopped,

That I would never again stuff a turkey

with popcorn that hadn't been popped.

FORTREX / ULTREX Trolling Motors. We offer Talon  
Shallow Water Anchors, MotorGuide & Minn Kota Products.

## 2 That Wonderful Rural Living Comes With A Cost.

A friend gave me a plaque that I have over the door to my deck looking down on beautiful Lake Berryessa. If you are lucky enough to lie at the lake, you are lucky enough." But that luck can be expensive.

Napa County is taking a hard look at two small, remote Lake Berryessa-area communities to try to keep their aging utility services from once again falling into dire straits.

Both communities face capital and maintenance needs for water and wastewater systems built in the mid-1960s, county reports said. But costs must be spread among only 330 customers in Berryessa Highlands and 171 in Berryessa Estates.

The challenge can affect more than the districts. A county report said Napa County since the mid-2000s has loaned a total of \$2.5 million for the Berryessa Highlands system and has received back interest payments, with the principal outstanding.

County supervisors will decide how to address the districts' future finances. They sit as the board of directors for Napa Berryessa Resort Improvement District serving Berryessa Highlands and Lake Berryessa Resort Improvement District serving Berryessa Estates.

Both boards informally endorsed doing rate studies to help figure out financial options for the two districts. Moving ahead with the studies at \$30,000 apiece using county money involves future approval by supervisors sitting as the Board of Supervisors.

Berryessa Highlands is located in a hilly area overlooking Lake Berryessa. It was created as a Berryessa resort community in the mid-1960s, but its population of about 920 people is nowhere near to the several thousand that developers originally envisioned.

In coming years, Berryessa Highlands will need more than \$11 million in water

and wastewater system improvements. Among them is an increase in wastewater treatment capacity to handle higher flows during major winter storms, a county report said.

The district is seeking grants to make these improvements, though some grants would require a local match. It likely wouldn't qualify for 100-percent state grants because the median household income among customers of \$59,500 annually is too high, the report said.

Rates for Berryessa Highlands water and sewage services last rose in 2011. Customers pay an average of \$500 bimonthly. They also pay an availability charge that for 2019-20 is \$240 per parcel.

County officials estimate that operating expenses will outstrip revenues in 2020-21. Any proposed rate hikes under Proposition 218 could be vetoed by district property owners.

A key unknown for the Berryessa Highlands system is whether nearby Steele Canyon Recreation Area will ever reopen as a full-service resort, as opposed to only offering camping and other limited services. Deputy Public Works Director Phillip Miller said the resort once provided about 30 percent of district revenues.

Berryessa Estates is located along Putah Creek northwest of Lake Berryessa. With about 1,800 residents, it too never matched its 1960s vision of about 5,000 residents and 40,000 annual visitors.

This district faces \$1.65 million in what a county report called "essential short-term projects." The median household income of \$43,200 annually is low enough to open the door to full state and federal grants, the report said.

Customers pay an average of \$600 bimonthly for water and sewage services. They pay an annual tax that for 2019-20 is \$981 per parcel.

## Lake Berryessa Boater Outreach Program 2019

The Lake Berryessa Boater Outreach Program is managed by the Solano Resource Conservation District and focuses on boater education at Lake Berryessa. The reservoir serves as a drinking water source for approximately 500,000 people in Solano County, as irrigation for agriculture, and use for local businesses such as Jelly Belly and Anheuser-Busch.

Outreach interns conducted one-on-one educational surveys with boaters and recreational users at Lake Berryessa every weekend, covering topics such as hazardous waste disposal and precautions to help keep the water clean. Boater surveys were conducted primarily at the three busiest launch concessions: Markley Cove, Steele Canyon and Capell Cove.

After a boater completed the survey, they would receive a free "Clean and Green" boating kit. Boating kits included a fueling bib to prevent gasoline spills while refueling, a West Marine coupon for \$15 dollars, and oil absorbent pillow and to prevent oil and hazardous contaminants from leaking into the lake.

Useful information such as a map of Lake Berryessa, booklets about California boating and environmental laws, and information explaining clean boating practices were also included in the boating kit. For fisherman, fishing line containers

were distributed so that the fishing line could be collected and recycled safely.

World Environment Day took place on June 1 and Coastal Cleanup Day on September 21. 184 volunteers attended World Environment Day and 327 pounds of garbage and 676 pounds of recyclables were removed from the shores of Lake Berryessa. For Coastal Cleanup Day, 74 volunteers attended and 327 pounds of garbage and 196 pounds of recyclables was collected.

The 2019 Lake Berryessa Boater Outreach program achieved its goal. Interns educated 3,582 people and conducted 878 boater surveys. Lake Berryessa Boater Outreach interns motivated eligible boaters and jet skiers to install a total of 365 oil absorbents, each of which can absorb up to a quart of oil. The work completed this summer has further advanced the education of boaters and recreators on oil absorbents and where to recycle them, as well as provided information on clean boating practices to keep Lake Berryessa one of the cleanest drinking water sources in California.

Interns conducted surveys at Oak Shores to educate the day-use recreators. Accompanying the interns was "Bilgee," a giant oil absorbent pillow who is the protector of clean waterways and a real-life superhero. Being large and over the top, Bilgee attracted the eye of boaters and day users alike. The day use survey enabled interns to interact with the non-boating public about hazardous waste disposal and how to keep the water clean.

## Why Third Parties Undermine Democracy: Duverger's Law

The "Duverger" in Duverger's Law is Maurice Duverger, a French scholar and former member of the European Parliament who died in 2014. He is best known for his analysis of what happens in states that use — that is, a system that awards victory to whichever candidate receives a plurality of the state's popular vote, regardless of how small that plurality may be.

Duverger's Law provides that "single-member plurality districts produce two-party systems." That is, when multiple candidates compete for a single job, and the job goes to whoever gets a plurality of the votes, the candidates will tend to sort into exactly two political parties. Third parties will vanish.

According to Duverger, this sorting happens because "the brutal finality of a majority vote on a single ballot to regroup their forces at the risk of being overwhelmingly defeated."

Consider, he wrote, "an election district in which 100,000 voters with moderate views are opposed by 80,000 communist voters." In a two-party race between the Moderate Party and the Communist Party, Moderates will prevail, and the winner of the election will reflect the preferences of a majority of the district's voters.

Now imagine that a second moderate candidate (perhaps motivated by the fact that they disagree with the Moderate Party's position on taxation) decides to jump into the race as a third-party candidate.

This candidate may have some disagreements with the Moderate Party, but they still hold moderate views on most issues. Thus, they will be likely to draw votes away from the Moderate Party's candidate — and if they draw enough votes, they will wind up electing a Communist.

Duverger's insight is that similarly-minded candidates have no choice but to join together into one of two parties, lest they wind up being divided and conquered.

Similarly, third parties wind up undermining democracy because they often cause the candidate who is least preferred by a majority of the electorate to win the election.

## The Lake Berryessa News

www.LakeBerryessaNews.com

Peter Kilkus

1515 Headlands Drive

Napa, CA 94558

pkilkus@gmail.com

Without **The Lake Berryessa News**  
there would be no Lake Berreyssa news.

Most editions of **The Lake Berryessa News** since 2005 are available as downloadable, searchable PDF files at [www.lakeberryessanews.com/archives/](http://www.lakeberryessanews.com/archives/)

The current data in this article includes all of Lake Berryessa (but NOT Pope Valley) - just the north end of the lake to the Berryessa Highlands and in between with a timeline of July 2018 to September 2019.

Currently there are eleven "Active" properties on the market ranging from \$289K to \$549. In addition to that there are six active "Acreage" properties ranging from \$650K for 43 Acres to a compound listed at \$1,602,276 with 42+ Acres.

There are currently four properties under contract - two in the Berryessa Highlands and one in the Berryessa Pines plus one Acreage property.

The Lake Berryessa area has had a great year on “solds”. Sixteen properties have sold since May of this year. Ranging from \$285K to \$480K, the latter being the highest most recent sale besides an acreage property that sold for \$725K.

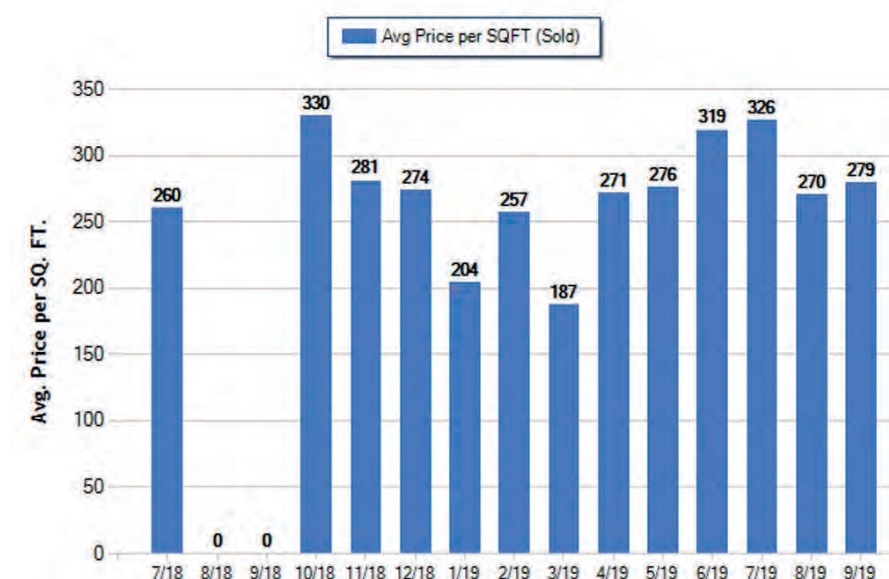

For the properties mentioned above:  
Average Sold price: \$387,185  
Average price per sq. ft.: \$303.82  
Average days on the market: 152 Days

There is now 23 months of inventory on hand which makes it a buyers market!

I continue to be optimistic - if we continue to get rain and the lake is full we should see continued interest in lake properties. With the resorts being fully booked for the summers that is good news for the Real Estate market. Of course we would love to see some movement soon on the Corners and the resort revitalizations. Next year is an election year so that always brings some uncertainty to the market, but interest rates are good and the job market is thriving. This is a great time to buy for first time home buyers and for second home buyers.

Currently there are approximately 35 Active vacant land parcels on the market. - priced from \$14K to \$599K - 11 of the 35 are "acreage" properties.

There are currently two under contract - both are in the Highlands  
There are six recent Solds:  
Four "lots"  
Two "Acreage" properties  
Average Days on the Market for vacant land is approximately 453 days.

(Paul Franson has been a Lake Berryessa supporter for many years. This is a shortened version of an article from his weekly newsletter, NapaLife: An Insider’s Look at Napa Valley, a wide ranging information trove for anyone interested in the amazing number of opportunities to have fun in the Napa Valley. It's available for subscription at: paul@napalife.com.)

A recent study said that only 31 percent of diners order wine first when they sit down for a meal, while the rest choose beer or spirits to get things rolling, concluding, “Wine is expensive, people prefer the cocktail experience, and wine is intimidating.”

Then I read a column in the latest Wine Business Monthly on high wine prices in restaurants. The high prices most local restaurants charge not only discourage patrons from buying Napa wines, but I think they hurt the restaurants and wineries.

The typical wine list prices are twice winery retail, which are more than most actual retail prices. Of course, restaurants buy the wines at wholesale, so the price you pay is typically three times what they pay. I know the restaurant business is tough, but an almost-\$100 markup on a wine they serve for \$130 and buy for \$35 is unconscionable.

These prices are particularly egregious for restaurants that want to attract locals by offering some reasonably priced food. A \$40 wine doesn’t go with a \$15 pizza or burger, for example. And don’t get me started on wines by the glass that start at \$12 or more. Of course, visiting tourists may be willing to be fleeced for a meal or two, but those of us who live here aren’t.

This situation has a number of results:  
- People buy imported wines, which are generally cheaper (excluding Bordeaux or other rarities).  
- Patrons choose a beer, nurse a cocktail or make do with water.  
- They bring wine, especially if there’s no corkage charge. That way the restaurant gets zilch instead of a reasonable markup.

The diners pay a corkage charge, which is almost surely less with wines they bring than the wine list price if the least expensive bottles are \$50 and up. And vintners and winery employees may pay nothing or little for the wines they bring. The restaurant gets less than if it charged a reasonable amount.

Or people may opt for takeout food or prepare their own food at home. Many locals simply go during happy hour and make that a meal. And I know many people who always take wines to restaurants, generally only choosing ones with lower or no corkage that night or always. I personally don’t want to take wine. I just wish the prices were reasonable. In almost every case, the restaurant suffers.

The obvious answer is to have both reasonable and expensive wines on the list, but restaurateurs say they want to keep the high prices since people might buy cheaper wines. Duh.

One solution is to have at least some reasonable wines for locals, maybe on a separate card or just offered during the week when there are fewer high-rolling tourists and more locals out to eat.

Aquarius (1/20-2/18): Everyone wants to live forever, but in your case, it would just mean more time being chased by a swarm of bees.

Pisces (2/19-3/20): Your extremely trying week will not be improved by your decision to deal with all problems by leaning on the horn.

Aries (3/21-4/19): Nobody likes a know-it-all, but then, you probably knew that already, you smug jerk.

Taurus (4/20 – 5/20): You should have more folding chairs around. If wrestlers come over and can’t find one, they’ll use something else.

Gemini (5/21 – 6/21): The stars foresee a second job promotion in the days to come, though they should probably be telling Dave about it.

Cancer (6/22-7/22): Despite the offer of a brand-new car, an all-expenses-paid trip to Greece, and a four-piece living room set, you’ll once again go for the box with the question mark on it.

Leo (7/23-8/22): You’ll finally become one with nature this week, thanks to a simple process known as disintegration.

Virgo (8/23-9/22): Enlightenment and confusion will both be yours this week when a tree falls in the woods only to make the sound of one hand clapping.

Libra (9/23-10/22): Wilderness sports may be growing in popularity, but people are not yet ready to appreciate your expertise at trout-shotgunning.

Scorpio (10/23-11/21): Were it officially sanctioned, judged by an impartial panel, and taking place somewhere other than your kitchen late at night, you’d pretty much shatter all existing hot dog eating records.

Sagittarius (11/22-12/21): It doesn’t take a rocket scientist to figure out what’s been wrong with you lately. That, sadly, takes three.

Capricorn (12/22-1/19): All of your boy scout training will come in handy this week when you’re forced to fight off three grown men inside a darkened tent.

How do they walk in these things?” grumbles Jack Lemmon, stumbling in his heels, newly dressed as his alter-ego Josephine, in “Some Like It Hot”. Like “jello on springs”, he marvels, when Marilyn Monroe sashays down the station platform. Monroe in high heels is the embodiment of a certain version of femininity – dainty, sexualized and uncomfortable, with limited mobility, and pandering to the male gaze.

Until the 17th century, high heels were mainly worn by men. High heels were, in fact, originally designed for men – and had an immensely practical purpose. Soldiers on horseback wore them in tenth-century Persia.

The heel helped keep them stable as they stood up in their stirrups and took aim at enemies with bows and arrows (cowboy boots still use heels in this way). Over time, heels appeared on the shoes of male aristocrats across Europe. Yet from the mid-17th century, heels became associated with supposedly “feminine” qualities such as frivolity, and so became women’s wear.

Until the mid-20th century heels were chunky, clunky things. After the second world war, techniques and materials used in aircraft engineering were applied to shoes, creating the stiletto. The spindly heel requires a thin metal shank, strong enough to bear the wearer’s weight yet flexible enough to allow the shoe to move.

Shoemakers and wearers have searched doggedly for a heel that is both high and comfortable. They aim to mitigate the angle created by a high heel, which forces the few square centimeters of the ball of your foot to bear the entire weight of your body. Joan Oloff, a podiatrist-turned-shoe-designer, makes footwear lined with memory foam to absorb the shock of each painful step. The sole is crafted to support the arch of the foot and distribute the wearer’s weight more equally.

Antonia Saint Dunbar, an entrepreneur, makes shoes with a heel cup and strips inside to stop the foot slipping around and getting blisters. Feet are unique and rarely conform perfectly to standard sizes, a problem that the downward angle of heels exacerbates as it changes their shape further. And growing numbers of companies make shoes with adjustable heels: two inches for the boardroom, four for the nightclub, none for the schlep home.

4 America's Defining Divide Isn't Left vs. Right. It's Old vs. Young.

Voters over retirement age will continue to dominate U.S. politics until at least 2060. Due to increasing life expectancy, falling birth rates and the sheer size of the baby boom generation, today's older voters have held on to political power longer than any previous generation in history. The U.S. electorate is the oldest it's ever been and will keep getting older for at least four more decades.

Researchers call it the "demographic transition." Americans over 65 are now the fastest-growing age group in the country. The U.S. Census projects that by 2035, the population past retirement age will outnumber the population under 18 for the first time in history. While younger, more diverse generations have captured the media narrative about U.S. politics, its defining feature in the future may be its oldest participants.

"As much as diversity is growing in the U.S., the baby boomer generation still has a lot of financial power, political power and consumer power," said William Frey, a demographer and senior fellow at the Brookings Institution. "There's a lot of focus in the media on the younger generations, but in fact, the younger population is growing more slowly than seniors."

America's current demographic makeup, Frey said, is unprecedented. Due to rising longevity, falling birth rates and the sheer number of baby boomers (currently between 55 and 73 years old), today's older Americans have held onto power longer than any previous generation. In 1950, as the boom began, just 8 percent of Americans were over 65; the United States had more people under 25 than over 45. By 2010, when the boomers began to retire, those numbers had flipped and the share of the population over retirement age had increased by 50 percent.

Their power goes beyond raw numbers. Older Americans are more likely to vote than millennials and Gen Xers, particularly in midterm and primary elections. They are three times more likely to donate to

political campaigns. Plus, they are clustered in rural and sparsely populated states, giving them disproportionately large Senate and Electoral College representation.

This partly explains why the average member of Congress is now 58.6 years old, roughly a decade older than they were in 1981 and two decades older than the population at large.

Without a dramatic increase in immigration or a sudden doubling of the birth rate, this is likely to be a permanent shift. The elderly population will continue to grow until at least 2026. By 2050, demographers expect the number of Americans over 65 to roughly triple and the number of Americans in their 20s to decline.

Between 2016 and 2036, Americans over 65 are the only age group expected to increase in numbers. This trend has profound implications for every American institution, but perhaps none more so than politics itself. Older voters have unique characteristics and specific interests that transcend the Democratic-Republican divide. From their economic circumstances to their demographic makeup, the concerns of older voters are only going to become more prominent as the baby boom generation enters retirement.

This creates a paradox for the candidates vying for the presidential nomination in 2020 and beyond. Though the most high-profile policy ideas — subsidized childcare, paid leave, universal health care — address the concerns of younger generations, the election itself may be determined by voters unlikely to reap benefits and wary of paying the costs.

Older voters have strikingly different wealth and income profiles than younger voters. Four out of five older families own homes, compared to just one in four younger families. Most own stocks and a large plurality are business owners. Nearly 1 in 9 older households are millionaires and, according to a 2015 study, are the only age group in America whose net worth has increased since 1989.

What is Haiku?

Spanish Flat poet and chef, Geoff Lake, sent me this haiku when power was finally restored at Lake Berryessa after four days last week.

Five days without heat or hot water  
how beautiful  
the wildflower, blossom, blooms

Traditional Haiku

A haiku is traditionally a Japanese poem consisting of three short lines that do not rhyme. In Japanese, there are five "moras" in the first and third line, and seven in the second, following the standard 5-7-5 structure of haiku.

A haiku is considered to be more than a type of poem; it is a way of looking at the physical world and seeing something deeper, like the very nature of existence. It should leave the reader with a strong feeling or impression.

An old silent pond...  
A frog jumps into the pond,  
splash! Silence again.

A summer river being crossed  
how pleasing  
with sandals in my hands!

Light of the moon  
Moves west, flowers' shadows  
Creep eastward.

The lamp once out  
Cool stars enter  
The window frame.

Modern Haiku

Many modern western poets do not subscribe to the 5-7-5 pattern. The Academy of American Poets recognizes this evolution, but maintains that several core principles remain woven into the tapestry of modern haiku. That is, a haiku still focuses on one brief moment in time, employs provocative, colorful imagery, and provides a sudden moment of illumination.

More recently, poets like Jack Kerouac paved the way for a freer rhythm in haiku. However, the same tiny moments in time are still captured in a very colorful and enlightened manner. A

haiku remains reserved for those special moments in life when you want to examine the very nature of existence, from a church bell ringing out in the night to the staggering moment you realize he loves you.

From across the lake,  
Past the black winter trees,  
Faint sounds of a flute.

Nightfall,  
Too dark to read the page  
Too cold.  
- Jack Kerouac

Insects on a bough  
floating downriver,  
still singing

Spring passes  
And the birds cry out-  
Tears in the eyes of fishes

On New Year's Day  
I long to meet my parents  
as they were before my birth.

A giant firefly:  
that way, this way, that way, this -  
and it passes by.

The haiku doesn't have to be serious. It can be funny- for example:

My life is Jello  
Sitting and waiting in the bowl  
Patiently to gel

And of course there are Cat Haiku poems:  
You never feed me  
Perhaps I'll sleep on your face.  
That will sure show you.

You must scratch me there!  
Yes, above my tail!  
Behold,"Elevator butt."

The rule for today  
Touch my tail, I shred your hand  
New rule tomorrow

Grace personified,  
I leap into the window.  
I meant to do that.

My small cardboard box.  
You cannot see me if I  
can just hide my head.

Oct./Nov., 2019 is shaping up to be the driest fall period in 23 years!

Season 7/1 to 6/30	First Rain	Total Rain By 1/1 at Monticello Dam
