## Checklist of Birds

This checklist has been prepared for visitors wishing to record birds they observe while recreating in the Berryessa region. The Berryessa area provides habitat for numerous bird species. Certain birds are only present in the summer, others winter in the area, and some just migrate through or occur irregularly. Habitats within the area include oak woodlands, grasslands, mixed chaparral, lake and riparian vegetation types. Three permanent waterways flow into Lake Berryessa: Capell Creek, Pope Creek and Putah Creek. Also present are numerous smaller intermittent streams and waterways. It is along these waterways and shorelines that the greatest number and variety of birds occur.

### For more information contact:

The Bureau of Reclamation - Lake Berryessa,

### Season of Occurrence

Sp = Spring (March-May)  
S = Summer (June-August)  
F = Fall (September-November)  
W = Winter (December-February)

### Abundance

a = Abundant, common species, numerous  
c = Common, frequently seen in small numbers  
o = Occasional, seen a few times during season  
u = Uncommon, present but not certain to be seen  
r = Rare, known to be present but not every year

### Status

\* = Threatened or endangered  
# = nests or has nested in the area

### Habitat Preferences (Hab.)

w = water areas which include the lake.  
r = riparian habitat bordering waterways.  
c = chaparral brushlands which include three brushland types and varied species composition.  
o = oak woodland vegetation of varying densities intermingled with grass, shrub, and gray pine.  
g = grassland areas of varying sizes including intermixes of chaparral and oak.
